

A110

PHOTOELECTRIC ANGLE ENCODER

Photoelectric angle encoder A110 is used to establish an informational link between the key machine components, industrial robots, comparators and DCC, NC or Digital Readout Units. It provides information about the value and direction of motion. The encoder is used in automatic control, on-line gauging, process monitoring systems, etc.

Three versions of output signals are available:

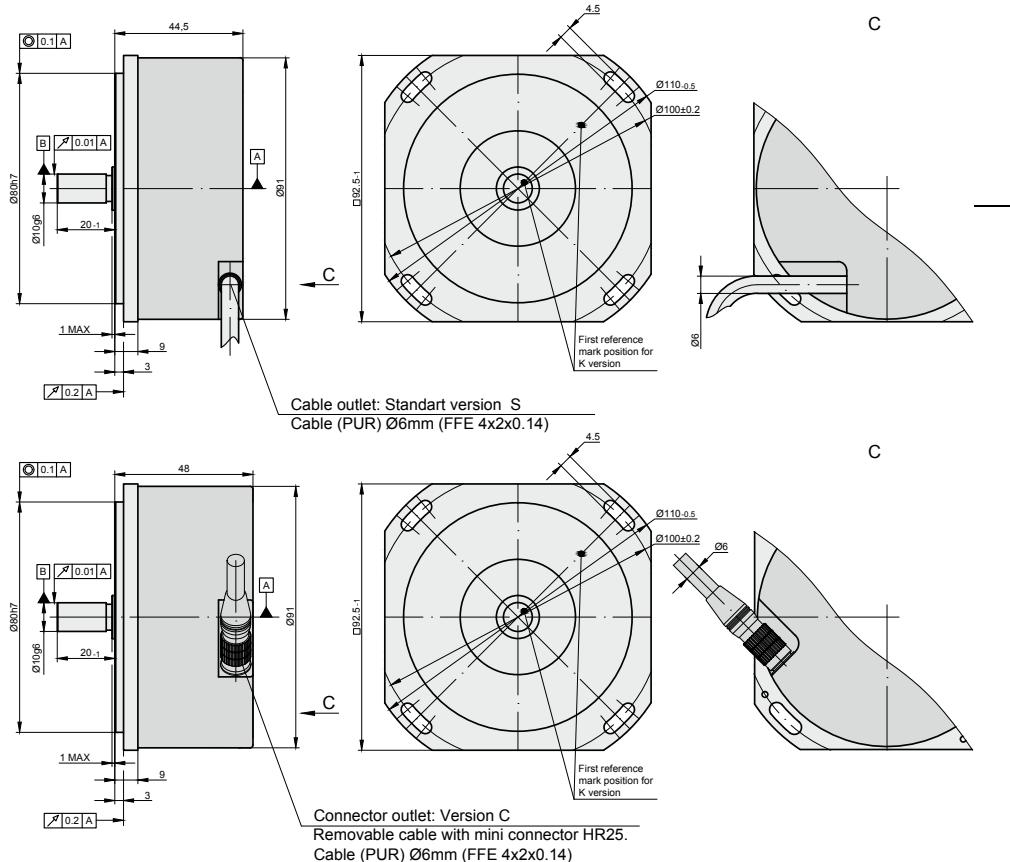

- A110-A - sinusoidal signals, with amplitude approx. 1 Vpp;

- A110-F - square-wave signals (TTL), with integrated subdividing electronics for interpolation x1, x2, x5, x10, x20, x25, x50 and x100.

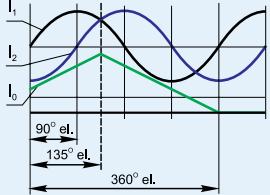

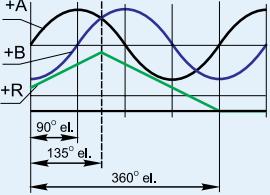

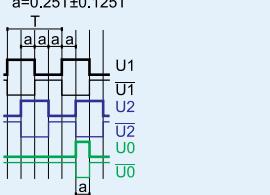

The modification with distance-coded reference marks is available.
